SUMMARY

With 10+ years of industry experience, I specialize in full-stack development, cloud-native architectures, and AI-driven automation. I build scalable, modern enterprise solutions that combine intuitive UX, cloud-native engineering, and GenAI capabilities to accelerate transformation initiatives and operational efficiency.

WORK EXPERIENCE

Senior Software Engineer | Oracle

2022- Present

- Transforming legacy Oracle Argus Safety into a cloud-based solution; the resulting modern UX and AI capabilities became a key differentiator, significantly increasing lead conversion during sales pitches.
- Built full-lifecycle traceability with drill-down KPI visualizations to monitor under processing, processed and rejected cases, enabling workflow managers to ensure that any record that comes for system processing has reached conclusion/end-state within system defined SLA.
- Created a standardized, accessible React UI component library that unified the user experience across multiple product lines and significantly accelerated front-end development through code reusability.
- Developed an AI-driven follow-up engine utilizing LangGraph and Python (FastAPI) that accelerated case workflows from hours to minutes by automating manual gap analysis and markdown document creation.
- Designed a scalable LLM orchestration framework for regulatory case narrative generation, leveraging state-machine-driven routing to determine data completeness, inject contextual prompts/examples, and compose section-wise outputs into compliant submission-ready summaries.

Application Security Consultant | Synopsys

2020- 2022

- Streamlined software delivery by orchestrating DevSecOps workflows covering 100+ microservices that synchronized security compliance with rapid release cycles, reducing security-related deployment delays.
- Built intelligent AppSec CI/CD pipelines that automate security gates based on risk profiles and code significance, ensuring compliance without stalling development.

Senior Software Engineer | Abas USA

2015-2019

- Engineered a cloud-hosted ERP solution targeting 95% feature parity with legacy native systems; led multidisciplinary UI/UX, full-stack, and QA teams and used Extreme Programming (XP) to accelerate rapid prototyping and deployment.
- Developed an interactive process orchestration tool to automate ERP transactions, slashing manual workflow configuration time by 50%; built real-time dashboards that accelerated the resolution of process bottlenecks.
- Designed and deployed a highly available static web hosting architecture using Amazon S3, Amazon CloudFront, custom DNS configuration, and TLS certificate via AWS Certificate Manager, enabling secure low-latency global content access with near-zero operational overhead and cost.

EDUCATION

MS in Software Engineering | George Mason University

2015

BS in Information Technology | University of Mumbai

2010

CERTIFICATIONS

Oracle Cloud Infrastructure Certified Generative AI Professional

Oracle AI Vector Search Certified Professional
